in may 2002 virginia s commonwealth transportation commissioner tasked his chief of technology research innovation with leading an effort to develop a definitive consistent and well documented approach for estimating the cost of delivering construction projects a task force that included virginia department of transportation vdot central and district office staff virginia transportation research council staff commonwealth transportation board members and a metropolitan planning organization member was formed to either locate a well founded tested method for estimating project costs that could be adapted for use by vdot or develop one the task group found that a vdot district had been using an estimation worksheet for several years that produced consistent and reliable results for certain types of roadway and bridge construction the task group determined that no other method examined had the specificity and potential of this tool the project team expanded

the tool by collecting extensive project data and obtaining evaluations of vdot project management personnel statewide to develop it further the existing excel worksheet with roadway and bridge estimates was expanded to include construction engineering to be applicable for interstates and to generate estimates for right of way and utilities costs data on completed projects were collected from all vdot districts to help calibrate the model further to account for cost variations across the state the task group also recognized early on that a very strong focus on project scoping was essential to accurate project estimation a previous vdot scoping committee had determined that vdot did not have a consistent uniform method that was being used statewide to scope projects as a result project cost estimates made at the scoping stage often did not hold up over time because key project features were invariably overlooked the result was inaccurate estimates testing of the cost estimation tool was completed in the summer of 2003 analysis of a sample of completed vdot construction projects throughout the state showed that the tool yielded results that on average differed from actual final project costs by 22 percent after further modifications the project cost estimation system pces as it was named became a fully operational system for vdot in october 2003 the pces is composed of three elements a cost estimation tool an improved scoping process and a project development website the responsibility for maintaining and updating the pces now rests with vdot s scheduling contract development division
